Q3 2026 | Separate Account Management

Large Blend Model Portfolio

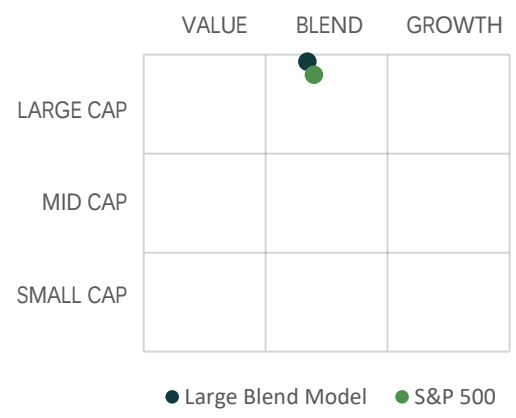

MAINSTREET ADVISORS

The Large Blend model portfolio seeks long-term capital appreciation from a portfolio of primarily large-capitalization stocks with high quality, durable businesses. The portfolio combines growth and value styles, with risk and return characteristics similar to the S&P 500.

SECTOR ALLOCATION

Large Blend Model Portfolio

DISCLOSURE

This model portfolio is provided by MainStreet Investment Advisors, LLC ("MainStreet Advisors") is a federally registered investment adviser under the Investment Advisers Act of 1940. Registration as an investment adviser does not constitute an endorsement of MainStreet by the SEC nor does it indicate that MainStreet has attained a particular level of skill or ability. The model performance shown is for illustrative purposes only, does not represent the actual performance of any client accounts, and does not reflect the results of actual trading of client accounts nor the impact that material economic and market factors had or might have had on the decision making if actual investor money had been managed. An investor's actual account is managed based on the model portfolio, but the actual composition and performance of the account may differ from those of the model due to holdings, timing, weighting, allocation, and pricing of trades. Portfolio performance, characteristics, fees, and volatility may differ from the model and/or benchmark. Hypothetical performance has many inherent limitations. The information is based, in part, on hypothetical assumptions made for modeling purposes that may not be realized in the actual management or trading of client accounts. MainStreet Advisors does not represent that the hypothetical model returns would be similar to actual performance had the firm actually managed the accounts in this manner. The models are not available for direct investment; no actual trades have been executed. The trades in models use market close prices, and the models are rebalanced monthly. The model is subject to change any time without notice, based on the market and economic conditions. The performance includes the reinvestment of dividends and other earnings and is net of fees. There is no guarantee that the companies will continue to issue dividends in the future. Investment management fees are defined as the highest applicable fees during the life of the composite which is currently 0.36% annualized.

References to indices and benchmarks are provided for your information only. The composition of a benchmark may not reflect the way in which a MainStreet Advisors' model is constructed in relation to expected returns, investment holdings, correlations, concentrations, or volatility, all of which are subject to change over time. It should be noted that market indices are always fully invested, and holdings are limited to the index charter. The market index is unmanaged and not available for direct investment.

The information contained in this report is not intended to be used as the sole basis of investment decisions and is not a recommendation to buy or sell. There are risks involved with investing, including possible loss of principal, and the value of investments and the income derived from them can fluctuate. Past performance is no guarantee of future results.

BENCHMARK DESCRIPTION:
The S&P 500 index measures the performance of 500 widely held stocks in US equity market. Standard and Poor's chooses member companies for the index based on market size, liquidity and industry group representation.

MORNINGSTAR FUND CATEGORY AVERAGE:
Morningstar Category is assigned by placing funds into peer groups based on their underlying holdings. The underlying securities in each portfolio are the primary factor in Morningstar's analysis as the investment objective and investment strategy stated in a fund's prospectus may not be sufficiently detailed for Morningstar's proprietary classification methodology. Funds are placed in a category based on their portfolio statistics and compositions over the past three years. Analysis of performance and other indicative facts are also considered. If the fund is new and has no portfolio history, Morningstar estimates where it will fall before giving it a permanent category assignment. Categories may be changed based on recent changes to the portfolio. Morningstar Category averages are designed to represent the average return of funds within their category over time. Morningstar Category is assigned by placing funds into peer groups based on their underlying holdings. Portfolios are placed in a category based on their average holdings' statistics over the past three years including historical and projected growth and valuation measures. Individual portfolios within a category invest in similar types of securities and therefore share the same risk factors and can be expected to behave more similarly to one another than to portfolios outside the category. Morningstar's calculation of total return is determined each month by taking the change in monthly market value, reinvesting all income and capital-gains distributions during that month, and dividing by the starting market value. Reinvestments are made using the actual reinvestment NAV, and daily payoffs are reinvested monthly. Unless otherwise noted, Morningstar does not adjust total returns for sales charges (such as front-end loads, deferred loads and redemption fees), preferring to give a clearer picture of a fund's performance. The total returns do account for the mutual fund internal management, administrative, 12b-1 fees and other costs taken out of fund assets. However, the returns do not include advisory fees.
